National Security Decision Memorandum 333

TO: The Secretary of Defense
    The Director of Central Intelligence

SUBJECT: Enhanced Survivability of Critical U.S. Military
        and Intelligence Space Systems

The President has expressed concern regarding the emerging Soviet
anti-satellite capability and the possible threat to critical U.S. space
missions this implies. He considers preserving the right to free use
of space to be a matter of high national priority. The U.S. trend toward
increasing exploitation of space for national security purposes such as
strategic and tactical reconnaissance, warning, communications, and
navigation — combined with the simultaneous trend toward a smaller
number of larger, more sophisticated satellites — emphasizes the need
for a reassessment of U.S. policy regarding survivability of critical
military and intelligence space assets.

Policy for Survivability of Space Assets

The President has determined that the United States will continue to make
use of international treaty obligations and political measures to foster
free use of space for U.S. satellite assets both during peacetime and in
times of crisis. However, to further reduce potential degradation of
critical space capabilities resulting from possible interference with U.S.
military and intelligence space assets, the President also considers it
necessary to implement improvements to their inherent technical surviv-
ability. Such survivability improvements should supplement and reinforce
the political measures, as well as extend the survivability of critical space
assets into higher level conflict scenarios.

The survivability improvements in critical military and intelligence space
assets should be predicated on the following U.S. objectives:

(1) Provide unambiguous, high confidence, timely warning of any attack
directed at U.S. satellites;
(2) Provide positive verification of any actual interference with critical U.S. military and intelligence satellite capabilities;

(3) Provide sufficient decision time for judicious evaluation and selection of other political or military responses after the initiation of an attempt to interfere and before the loss of a critical military or intelligence space capability;

(4) Provide a balanced level of survivability commensurate with mission needs against a range of possible threats, including non-nuclear co-orbital interceptor attacks, possible electronic interference, and possible laser attacks;

(5) Substantially increase the level of resources needed by an aggressor to successfully interfere with critical U.S. military and intelligence space capabilities;

(6) Deny the opportunity to electronically exploit the command system or data links of critical U.S. military and intelligence space systems.

Planning for Improved Survivability

The President directs that efforts be initiated jointly by the Secretary of Defense and the Director of Central Intelligence to prepare an aggressive time-phased, prioritized action plan which will further develop and implement this policy framework. This plan should (1) place emphasis on short-term and intermediate-term measures to enhance the survivability of critical military and intelligence space capabilities against Soviet non-nuclear and laser threats at low altitudes and Soviet electronic threats at all altitudes, and (2) consider long-term measures which will provide all critical military and intelligence space systems with a balanced level of survivability commensurate with mission needs against all expected threats, including threats at higher altitudes.

Short/intermediate term measures for consideration in the plan should include, but not be limited to, the following capabilities:

(1) 

................................................................................................................................................
................................................................................................................................................
................................................................................................................................................
................................................................................................................................................
................................................................................................................................................
................................................................................................................................................
................................................................................................................................................
................................................................................................................................................
Longer-term measures should provide balanced survivability for critical space capabilities against the full range of credible threats. The plan should detail the military and intelligence utilization of specific systems at various levels of potential conflict and should select survivability measures and implementation schedules for each critical military or intelligence satellite in accord with their scenario-related mission needs. The threats to be considered include threats of physical attack against satellites, either by non-nuclear or laser techniques; electronic and exploitation threats against command links, data links, and communications links; and threats of electronic or small-scale physical attack against ground stations. Continued consideration should be given to protection against nuclear effects from events other than direct attack, for those space assets which support nuclear scenarios. This portion of the plan should consider measures necessary to enhance the survivability of both ground and spaceborne elements and should consider proliferation or back-up alternatives where appropriate, as well as active and passive measures.

The plan should develop a range of implementation schedule/funding profiles for Presidential consideration. An initial version of this plan should be submitted to the President no later than November 30, 1976.
